Place here short abstract in English (between 150 and 250 words).

Key words and phrases: computer science, information technologies, conference proceedings.

1. Introduction

The proposed submission should describe original work not submitted or published elsewhere and should begin with an abstract. The complete text should be not less than 6 pages and not more than 7 pages long in total, i.e. including all figures, tables and references.

2. Main section

Additional care must be taken when inserting formulas, figures and tables.

Formula

$$a^n + b^n = c^n \tag{1}$$

with reference (1).

It is essential that all illustrations are as clear and as legible as possible. Vector graphics (pdf and eps) — instead of rasterized images — should be used for diagrams and schemas whenever possible. Please check that the lines in line drawings are not interrupted and have a constant width. Grids and details within the figures must be clearly legible and may not be written one on top of the other. Line drawings are to have a resolution of at least 600 dpi (preferably 1200 dpi). The lettering in figures should not use font sizes smaller than 6 pt. Figures are to be numbered and to have a caption which should always be positioned under the figures, in contrast to the caption belonging to a table, which should always appear above the table (see Fig. 1).

Ensure that all the tables are cited in the text in the correct order (see Table 1).

Table example

Table 1

no	X	Y	R	Color
1	100	170	30	red
2	100	90	60	red
3	230	250	50	red
4	130	240	60	red
5	300	130	30	red
6	200	150	90	red

Figure 1. Logo

Text fragments of fewer than four lines should not appear at the tops or bottoms of pages, following a table or figure. In such cases, it is better to set the figures right at the top or right at the bottom of the page. A figure should never be placed in the middle of a paragraph.

The list of references should be given at the end of the text in a separate section. Citations inserted in the text should use square brackets and the ordinal number of the item. Numbers should be grouped where appropriate.

Citation examples: book [1,2], the section in the book [3], article [4,5], conference proceedings [6].

3. Conclusions

The conclusion should contain a brief summary of the study.

Acknowledgments

The work is partially supported by RFBR grant No 16-01-20379.
